cc spanning protein (e.g. Trail Receptor without intracellular Domain; TRID)

Cc by replacing the nucleic acid encoding the TM of the DD-lacking

cc membrane-spanning protein with a candidate nucleic acid sequence to

cc produce a nucleic acid encoding a modified DD-lacking membrane spanning

cc protein. The modified nucleic acid is then transfected into a host cell,

cc which expresses a DD-containing receptor. The absence of apoptosis of the

cc host cell is determined following exposure of the transfected cell to an

cc apoptosis oinducing ligand. Candidate nucleic acids encoding TM prevent

cc apoptosis of the host cell. The modified nucleic acid encoding the

cc modified death domain-lacking membrane-spanning protein can also include

a nucleic acid sequence encoding an epitope tag. The present sequence is

ca FLAG-TRID clone, which was used in the method of the present invention.

Cc FLAG-epitope is a useful marker to purify proteins encoded by the

cc modified DD-lacking membrane-spanning protein. The identified TM and

cc membrane-spanning proteins may be used in defining processes involved in

cc ell suicide and tissue homeostasis, and to evaluate, interfere and treat
                                                                                                                 Matches

CC protein that has a membrane proximal O-glycosylation region. The CC invention provides methods for the recombinant production of TR5 CC and its use in diagnostic and therapeutic methods. Treatment of a CC subject in need of enhanced TR5 activity comprises administering an CC form so as to effect production of the polypeptide in a CC form so as to effect production of the polypeptide activity in vivo. CC Treatment of a subject with the need to inhibit TR5 polypeptide activity comprises administering an antagonist to the polypeptide activity comprises administering a polypeptide for its ligand, substrate or receptor. Diagnosing a disease or a susceptibility comprises determining the presence or absence of mutation in the comprises determining the presence or absence of mutation in the genome of the subject and/or analysing for the presence or amount of TR5 compounds compound and assessing the ability of it to bind to the cells. The cartive agents can be used for the treatment of chronic and acute confidence of inflammation, arthritis, septicaemia, autoimmune diseases (e.g.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         New polynucleotide encoding TR5 polypeptide - used to diagnose, prevent and treat e.g. inflammation, arthritis, septicaemia, autolumune diseases, infections, stroke, ischaemia, ARDS, psoriasis, restenosis, brain injury, AIDS and bone diseases
graft vs host disease, infection, stroke, ischae respiratory disease syndrome, restenosis, brain diseases, cancer (e.g. lymphoproliferative disordiseases, cancer (e.g. lymphoproliferative disordiseases)
                                                                                                         inflammation, arthritis, septicaemia, autoimmune diseases (e.g. inflammatory bowel disease, psoriasis), transplant rejection,

as nutritional sources or supplements. Such uses include use as a protein or amino acid supplement, use as a carbon source, use as a nitrogen source and use as a source of carbohydrate. They may also have utility in compositions used for bone, cartilage, tendon, ligament, and/or nerve tissue growth or regeneration, as well as for wound healing and tissue repair and replacement, and in the treatment of burns, incisions and
                                                                                                                                                                 although no supporting data is given. Suggested activities include nutritional activity, cytokine and cell proliferation/differentiation activity, immune stimulating (e.g. as vaccines) or suppressing activity haematopoiesis regulating activity, tissue growth activity, haemostati activiny/inhibin activity, chemotactic/chemokinetic activity, haemostati and thrombolytic activity, receptor/ligand activity, and tumour activity, cadherin/tumour invasion suppressor activity, and tumour inhibition activity. The polynucleotides and proteins can also be used
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Jacobs K,

                                                                                                                                                                                                                                                                                                                                                                                              sequences. AAZ21103 to AAZ21112 represent probes for the secreted proteins. The polynucleotides and proteins are predicted to have biological activities which would make them suitable for treating, preventing or ameliorating medical conditions in humans and animals,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                               AAZ21093 to AAZ21102 encode new human secreted proteins and AAY29861 to AAY29873 represent the secreted proteins encoded by the polynucleotide sequences. AAZ21103 to AAZ21112 represent probes for the secreted

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            δÃ
The present sequence represents tumour necrosis factor receptor (TNFR) TR5, also known as TRID or DCR1. The invention relates to TNFR related polypeptides TR1, TR3 and TR5 (see AAX05742-44) and their ligand TL3 (see AAX05745). TR1, TR3, TR5 and TL3 are used in claimed methods of identifying agonists and antagonists, i.e. compounds that bind to the receptors or ligand, and which activate (agonist) or inhibit activation of (antagonists) TR1, TR3, TR5 or TL3. A screening kit for identifying agonists, antagonists, ligands, receptors, substrates, enzymes etc. for TR1, TR3, TR5 or TL3 polypeptides is provided. The agonists and antagonists are useful for treatment of chronic and acute inflammation, arthritis, septicaemia, autoimmune disease e.g. inflammatory bowel disease, infection, stroke, ischaemia, acute respiratory disease syndrome, restenosis, brain injury, AIDS, bone diseases, cancer (e.g. lymphoproliferative disorders), atherosclerosis and Alzheimer's
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Tumour necrosis factor receptor; TR5; TRID; DcR1; agonist; antagonist; screening; human; cancer; AIDS; Alzheimer's dise; inflammation; arthritis; septicaemia; autoimmune disease; psoriasis; inflammatory bowel disease; transplant rejection; graft versus host disease; infection; stroke; ischaemia; acute respiratory disease syndrome; restenosis; brain injury
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      ulcers. The proteins which induce cartilage and/or bone growth in circumstances where bone is not normally formed, have application in the healing of bone fractures and cartilage damage or defects in humans and other animals.

                                       This sequence is the human TRAIL receptor TRAIL-R3 of the invention. An CC antibody against the TRAIL receptors is useful for detecting mammalian CC DR5 or TRAIL-R3 proteins in a sample. Recombinant cells are useful in CC bioassays for screening for (ant)agonists of DR5 or TRAIL-R3 proteins. CC (Ant)agonists identified by the assay are useful for modulating the cappototic activity mediated by DR5 or TRAIL-R3 proteins. Apoptosis crelated conditions which are treated in this way, include cancer CC (e.g. Lymphomas and carcinomas), autoimmune diseases (e.g. systemic lupus crythematosus and immune-mediated glomerulonephritis), viral infections CC (e.g. herpes virus, poxvirus and adenovirus), degenerative disorders CC (e.g. hkzheimer's disease and Parkinson's disease), amyotrophic lateral CC syndromes (e.g. aplastic anaemia) and ischaemic injury (e.g. myocardial CC syndromes (e.g. aplastic anaemia) and ischaemic injury (e.g. myocardial confarction and stroke). The polynucleotides can also be used to treat these diseases. Antisense oligonucleotides to the DNA sequences can be used to form a composition that is useful for inhibiting expression of a
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Best

                                                                                                                                                                                                                                                                                                                                                                                                                                   The present sequence is human tumour necrosis factor (TNF)-related apoptosis-inducing ligand (TRAIL) binding protein (BP). TRAIL-BP can be used for inhibiting the biological activities of TRAIL or for purifying TRAIL. TRAIL-BP proteins can be used for treating a TRAIL-mediated disorder such as T cell death in HIV-infected patients. They can be used for treating thrombotic microangiopathies such as thrombotic thrombocytopenic purpura, haemolytic-uraemic syndrome, clotting of small blood vessels or systemic lupus erythematosus. The TRAIL-BP nucleic acids can also be used for gene therapy. They can also be used as
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               New isolated TRAIL binding protein - which binds to a tumour necrosis factor-related apoptosis inducing ligand, used in the diagnosis and treatment of TRAIL-mediated disorders
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Human; TNF-related apoptosis-inducing ligand binding protein; clotting; TRAIL-BP; tumour necrosis factor; T cell death; HIV; gene therapy; thrombotic microangiopathy; thrombotic thrombocytopenic purpura;
                                                                                                                                                                                                                                                                                                                                                                                        Sequence

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               DB seq length: 0

S20963
homeotic protein Hox B3 - mo N; Alternate names: homeotic
                                                                                                                                                                                             밁
```

```
A;Gene: TP0863
C;Superfamily: nitrogen fixation protein nifS
C;Keywords: phosphoprotein; pyridoxal phosphate; sulfurtransferase
F;232/Binding site: pyridoxal phosphate (Lys) (covalent) #status pr
F;374/Active site: Cys (cysteine persulfide intermediate) #status pr
                                                                                                                                                                                                                                                                                                                                                                                        they, L.; Weidman, J.; Smith Science 281, 375-388, 1998 A;Title: Complete genome sec A; Reference number: A/1250; A; Accession: G71272

                                                                                                                                                                                                                                                                                                                                                                                                                                                   FUNCTION: Receptor for the cytotoxic ligand TRAIL. Lacks a cytoplasmic death domain and hence is not capable of inducing apoptosis. May protect cells against TRAIL mediated apotopsis by competing with TRAIL-R1 and R2 for binding to the ligand. SUBCELULAR LOCATION: Attached to the membrane by a GPI-anchor. TISSUE SPECIFICITY: Higher expression in normal tissues than in tumor cell lines. Highly expressed in peripheral blood lymphocytes, spleen, skeletal muscle, placenta, lung and heart. PTM: N-GLYCOSYLATED AND O-GLYCOSYLATED. SIMILARITY: CONTAINS 2 TNFR-CYS REPEATS.
                                                                                                                                                                                                                                                                                                                                                                                                                        European Bioinformatics Institute.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              SEQUENCE FROM N.A.
                                                                                                                                                            caspase 8 leading to subsequent activation of effector caspas that execute apoptotic death of the cell.

SUBUNIT: Homotrimer (Potential). Can interact with TRADD and SUBCELLULAR LOCATION: Type I membrane protein.

ALTERNATIVE PRODUCTS: 2 ISOFORMS; A LONG FORM/TRICK2B (SHOWN AND A SHORT FORM/TRICK2A; ARE PRODUCED BY ALTERNATIVE SPLICINA TISSUE SPECIFICITY: Widely expressed in adult and fetal tissu very highly expressed in tumor cell lines such as HeLa S3, K5 HL-60, SW480, A549 and G361; highly expressed in heart, periphilar the such as the content of the s
                                    very highly expressed in tumor cell lines such as HeIa S3, K5 HL-60, SW480, A549 and G361; highly expressed in heart, perip blood lymphocytes, liver, pancreas, speed, thymus, prostate, ovary, uterus, placenta, testis, esophagus, stomach and throu the intestinal tract; not detectable in brain.

INDUCTION: INFRSF10B is regulated by the tumor suppressor p53
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         FUNCTION: Receptor for the cytotoxic ligand TRAIL; mediates apoptosis in a caspase-dependent manner. Can trigger the nuclear factor kappaB-pathway and can bind the cytoplasmic adapter molecule FADD/MORTI which engages initiator caspases such as
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Cell 4:563-571(1999).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           CE FROM N.A. DEVELOPMENTAL STAGE: Abundant in unfertilized eggs. Not detection late gastrula or early neurula stages. Expressed in mid-new stages and maintained through tadpole stages.

DOMAIN: Lys-Thr.X-X-X-Trp motif is involved in the activation boundary.
                                                                                                                                                                                                                                                                                                                                                                           are coupled to the beta-catenin canonical signaling pathway, which leads to the activation of dishvelled protesins, inhibition of GSK-3 kinase, nuclear accumulation of beta-catenin and activation of whit target genes. A second signaling pathway involving PKC and calcium fluxes has been seen for some family members, but it is not yet clear if it represents a distinct pathway or if it can be integrated in the canonical pathway, as PKC seems to be required for Whit-mediated inactivation of GSK-3 kinase. Both pathways seem
                                                                                                                                                                                                                                                                               SUBCELLULAR LOCATION: Integral membrane protein TISSUE SPECIFICITY: In the embryo, expressed in
